RESEARCH OVERVIEW

I'm a Ph.D. student at Underwood International College, Yonsei University, working with Prof. Jean Y. Song at the DIAG Lab. My research lies at the intersection of Human-Computer Interaction and AI, with a focus on understanding how AI can serve as a human-centered tool that supports self-exploration and communication in complex social and cultural contexts. Before joining DIAG Lab, I worked as a marketer and designer, which shaped my interdisciplinary perspective on human behavior, psychology, and the design of AI systems. I am always open to exploring new domains and emerging research questions.
